

Responding to Fermanagh & Omagh District Council
 Re the Local Development Plan
 Draft Plan Strategy

December 2018

I am writing this submission in response to Local Development Plan 2030 Draft Plan Strategy issued recently by FODC.

I write therefore to request that the area of the Sperrin's AONB already indicated as having no capacity for wind energy development is extended to include the area proposed to become an ASAI (Area of Significant Archaeological Interest) as an extension of Beaghmore ASAI. This area includes the townlands of Aghascrebba, Crock, Carnanrancy, Keerin, Teebane East and Muninamale.

The introduction of turbines would have a distinctive negative visual impact on the setting of the unique features of cultural heritage and high scenic value of this unique landscape.

That this scenic historic landscape is unsuitable for wind development has been recognised by the planning authorities in recent years when various applications for turbines were refused.

In making this response I am requesting that FODC ensures that the character of this historic landscape is preserved by including the proposed ASAI within the area that has no underlying capacity for wind development.

Not alone do wind turbines have a detrimental effect on the visual amenity of this historic landscape they also are impacting on the health and wellbeing of residents, *no human being should feel endangered or under threat*. The studies, the complaints and the objections can no longer be ignored. The word of Developers who actually do not care what happens to anything whether human beings, animals, water, protected species, landscape... We are traumatised by the inhumanity being shown towards our communities. SUPPORT ME I AM HUMAN I have the basic right to live in my own home, in my own peaceful surroundings where silence is priceless, surrounded by the beauty of our landscape.

Wind turbines a potential health risk: World Health Organisation:

Wind turbines blamed for hearing loss, World Health Organisation WIND turbines can cause risks to health including hearing loss, tinnitus, high blood pressure and even heart problems, according to a new report published by the World Health Organisation.

In my heart and mind and very relevant to my family and I and indeed others so I sincerely ask that you will at least read and consider my submission as member of the future generation quite capable of doing my own research.
